

Secured ChatGPT-like capabilities across all company data

Your data stays private from public AI

Overview

AGAT Innovation stands at the forefront of the Productivity revolution, introducing BusinessGPT, a cutting-edge AI solution providing chatGPT-like comprehensive insights from company-wide data without compromising on privacy and security.

AGAT Innovation is a spin-off from the well-established AGAT Software. AGAT Software has a decade-long track record of providing real-time compliance and security solutions for industry-leading collaboration platforms such as Teams and Webex, serving hundreds of customers, including 25 Fortune 500.

AGAT Innovation leverages its parent company's technological expertise, presence in the hub of company data flow, executive skills, and established customer base.

Company data

- Name:** AGAT Innovation
- Established:** 2023
- Location:** Jerusalem, Israel
- Industry:** Productivity
- Employees:** 10
- Funding:** Bootstrapped
- Product stage:** First deployments

AGAT Software customer base

Proven execution capabilities around the globe

The Problem

- Overwhelming business tools and data sources**
Lack of ability to attain a holistic view and provide decision-makers with precise and consolidated real-time answers to business questions.

- Sharing sensitive data with public AI engines**
Regulatory and other restrictions prevent uploading sensitive data into public AI services (e.g., ChatGPT, Google Bard).

BusinessGPT solution

Interact with all company data

- Allows users to ask questions and generate new content based on various data sources.

Secure on-prem/private cloud solution

- No need to expose company data to public AI services, thanks to secure on-prem/private cloud deployment of the complete AI solution.

Sync and Control Data Permissions

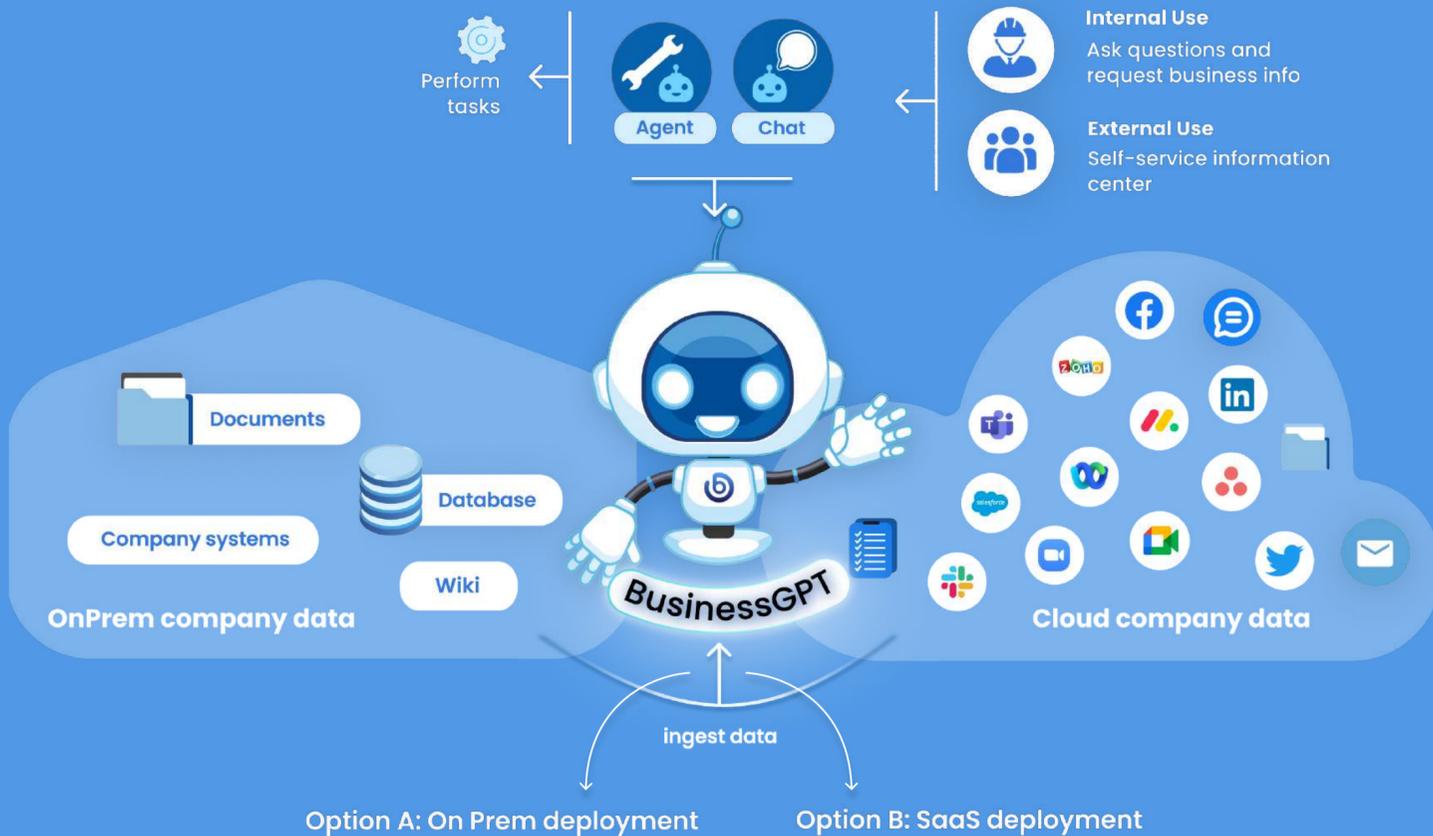

- Answers provided to users are strictly based on their existing synchronized access permissions in the source systems (CRM, Document Management, etc.)

AI Assistant- performing activities

- Get the up-to-date status of customers and projects.
- Escalate Urgent Business Issues
Interact with humans when answers are not found in data.
- Update Tasks and CRM data

★ Key Benefits

Empower Data-driven decisions
Unveil a holistic view by analyzing data from various sources for a complete perspective of your customers, projects, employees and risks.

Enhanced Customer Experience
AI chatbots offer a user-friendly interface, making it convenient for customers to interact and seek assistance without navigating complex systems.

Instant Information Retrieval
Access instant answers to your business questions, reducing the time spent searching for information.

24/7 Availability
AI chatbots can provide instant assistance round-the-clock, ensuring customers get help whenever they need it, even outside of business hours.

Save search time
Save hours of weekly time wasted on searching and collecting data from others. Save time by taking advantage of BusinessGPT's capabilities of summarising information, writing responses and content, and performing tasks.

Reduced Response Time
Chatbots offer rapid responses, minimizing customer wait times and enhancing overall satisfaction.

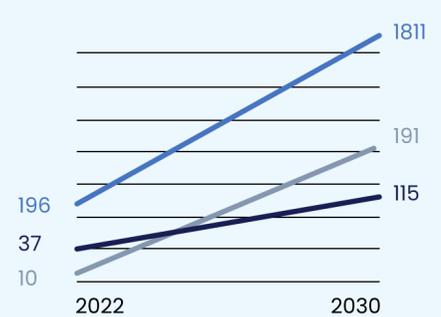

Leadership and Teams

- Yoav Crombie – CEO and co-founder, B.Sc. & MBA.
- Guy Eldan – Managing Director and co-founder, B.Sc. & MBA.
- Working together for 25 years, starting in a computer unit in the Israeli Army. Developed a technology acquired by Symantec.
- Majority of workforce in Israel. Five software engineers with first degree in computers.

Market size

Almost every mid and large organization, and a special niche for highly regulated orgs.

Competition

Many companies offer built-in AI capabilities, including MS Copilot and Google Duet. However, few players offer a holistic cross-platform analysis of multi-data sources and almost none offer this as an on-prem solution. Among the players can be found askme.ai, Glean, Jigso, ingestAI. On top of that, the market of AI Assistants (Autonomous Agents) is just evolving, and companies that will be the first to integrate such capabilities into their offering are expected to have a competitive advantage.
